

1. Three particles of mass $3m$, $2m$ and km are placed at the points whose coordinates are $(1, 5)$, $(6, 4)$ and $(a, 1)$ respectively. The centre of mass of the three particles is at the point with coordinates $(3, 3)$.

Find

- (a) the value of k , **(3)**
- (b) the value of a . **(3)**

2. At time t seconds, where $t \geq 0$, a particle P is moving on a horizontal plane with acceleration $[(3t^2 - 4t)\mathbf{i} + (6t - 5)\mathbf{j}] \text{ m s}^{-2}$.

When $t = 3$ the velocity of P is $(11\mathbf{i} + 10\mathbf{j}) \text{ m s}^{-1}$.

Find

- (a) the velocity of P at time t seconds, (5)

- (b) the speed of P when it is moving parallel to the vector \mathbf{i} . (4)

3.

Figure 1

The uniform lamina $ABCDEF$, shown shaded in Figure 1, is symmetrical about the line through B and E . It is formed by removing the isosceles triangle FED , of height $6a$ and base $8a$, from the isosceles triangle ABC of height $9a$ and base $12a$.

(a) Find, in terms of a , the distance of the centre of mass of the lamina from AC . (5)

The lamina is freely suspended from A and hangs in equilibrium.

(b) Find, to the nearest degree, the size of the angle between AB and the downward vertical. (4)

Q3

4. A truck of mass 1800 kg is towing a trailer of mass 800 kg up a straight road which is inclined to the horizontal at an angle α , where $\sin \alpha = \frac{1}{20}$. The truck is connected to the trailer by a light inextensible rope which is parallel to the direction of motion of the truck. The resistances to motion of the truck and the trailer from non-gravitational forces are modelled as constant forces of magnitudes 300 N and 200 N respectively. The truck is moving at constant speed $v \text{ m s}^{-1}$ and the engine of the truck is working at a rate of 40 kW.
- (a) Find the value of v . **(5)**

As the truck is moving up the road the rope breaks.

- (b) Find the acceleration of the truck immediately after the rope breaks. **(4)**

6.

Figure 2

A small ball is projected with speed 14 m s^{-1} from a point A on horizontal ground. The angle of projection is α above the horizontal. A horizontal platform is at height h metres above the ground. The ball moves freely under gravity until it hits the platform at the point B , as shown in Figure 2. The speed of the ball immediately before it hits the platform at B is 10 m s^{-1} .

(a) Find the value of h . (4)

Given that $\sin \alpha = 0.85$,

(b) find the horizontal distance from A to B . (8)

7.

Figure 3

A uniform rod AB of weight W has its end A freely hinged to a point on a fixed vertical wall. The rod is held in equilibrium, at angle θ to the horizontal, by a force of magnitude P . The force acts perpendicular to the rod at B and in the same vertical plane as the rod, as shown in Figure 3. The rod is in a vertical plane perpendicular to the wall. The magnitude of the vertical component of the force exerted on the rod by the wall at A is Y .

(a) Show that $Y = \frac{W}{2}(2 - \cos^2 \theta)$. **(6)**

Given that $\theta = 45^\circ$

(b) find the magnitude of the force exerted on the rod by the wall at A , giving your answer in terms of W . **(6)**
